

wasp
TRACKING SOLUTIONS

Customer Success Story

f “Since implementing AssetCloud, **we’ve passed all of our asset audits** because the reporting is so easy, and the locations are consistently up to date.”

— IT Lead Technician

The Client

California School District

One of California's largest school districts, serving over 42,000 students in grades 9-12. The district has 19 high schools, five continuation schools, an adult school, two career technical facilities, and several special education sites.

The Challenge

Prior to implementing an asset management solution, the district relied on spreadsheets to manually track items. This process was error-prone, time consuming, and made it difficult to stay in compliance with audits due to outdated records.

The spreadsheets made simple tasks such as asset updates and disposals complicated.

The Solution

After conducting online research, the district selected AssetCloud to resolve their asset management challenges. "AssetCloud is simple to use with an easy-to-understand interface and it met all of our audit requirements," said the IT Lead Technician with the district. "We also purchased Wasp's DR6 Android mobile computers, which allow each of our sites to easily audit and maintain their assets."

The Client

California School District

*"I would recommend AssetCloud to anyone looking for a **comprehensive asset management solution...**" — IT Lead Technician*

The Result

Today, AssetCloud is used district-wide to track more than 200,000 assets, including any device valued at over \$500, such as Chromebooks. The district has 142 users and has integrated their software with Microsoft System Center, a student information system, and a student textbook system which is used to check-out assets. The district's goals for implementation were two-fold: to track assets and to successfully fulfill audit requirements.

"Since implementing AssetCloud, we've passed all of our asset audits because the reporting is so easy, and the locations are consistently up to date," said the IT Lead Technician.

District employees find the solution easy-to-use and simple to train others on. And most importantly, because the district consistently passes all audits, valuable and much-needed funding continues to be available.

"I would recommend AssetCloud to anyone looking for a comprehensive asset management solution," said the IT Lead Technician. "Wasp has been a joy to work with for the past seven years. It isn't just the sales staff that is great to work with but also the CEO, developers, and tech support. Wasp is hands down one of my favorite companies to work with."
